REDHAWK

Introducing the RedHawk Warning Light

Simple Alarming at it's best!

The RedHawk looks and functions like a standard alarm light, but is also designed as a simple solution for those wanting remote alarming for their site. Think of it as a cellular alarm dialer.

Installation is a snap! Attach the alarm output of any device to the RedHawk and the light will turn on when the output is activated, but that's just the beginning.

As well as the onsite visual alarm light, the RedHawk is connected to your local cellular network and sends out alarms in real time, to any number of specified contacts, however you want to receive them.

Alarms can be sent out via text message, phone call, or email.

Standard Alarm setup would include:

• One high or low level alarm
• Power loss notification
• Communications loss notification

Need additional inputs? We also offer the RedHawk 1 w/ (1) 4-20 mA input and a relay driver on board, an internally din rail mountable RedHawk 2 with (2) 4-20 mA inputs, and a RedHawk Gateway w/ RS232 to connect to your PLC. All units are expandable and the possibilities are endless!

Need simple monitoring and alarming for your site? The RedHawk is just what you're looking for.
